Professional Summary

Master's student in Computer Engineering with dual B.S. degrees in Electrical and Computer Engineering. Research-focused in robotics, embedded systems, and AI-powered simulation. Experienced in ROS2, Python, C++, PyTorch, and computer vision. Passionate about space robotics and autonomy systems with hands-on experience in AI-enhanced physical modeling, robotic perception, and sensor fusion.

Education

University of Maine – Orono, ME

- M.S. in Computer Engineering, Robotics & AI Focus (Expected May 2026)
- B.S. in Computer Engineering & B.S. in Electrical Engineering, GPA: 3.748 (May 2024)
- Robotics Team Officer (Software/Hardware Co-lead, Treasurer) (2022-2024)
- Francis Crowe Society
- Certified in French

Technical Skills

- **Programming:** Python, C++, C, Java, SQL, Assembly, Verilog, VBA/VBS
- **AI/ML:** PINN, PyTorch, TensorFlow, Diffusion Models, DDQN, OpenCV, GPT API, Local LLM
- **Simulation/Modeling:** SINDy, MATLAB, NGSpice, Micro-Cap, Altium Designer
- **Robotics/Embedded:** ROS2, Docker, Arduino, Raspberry Pi, motor control
- **Web/Deployment:** HTML, JavaScript, TypeScript, React, Node.js, Webpack, Vite
- **Core:** Robotic autonomy, sensor fusion, control systems, AI-enhanced simulation, OCR, database integration

Experience

Graduate Research Assistant – UMaine ECE Dept. | *Jul 2024 – Present*

- Adapting Latent Diffusion Models for real-time simulation of offshore wind turbine dynamics
- Building AI pipelines to predict blade alignment using physics-informed neural networks
- Automating scholarship matching using local LLMs and Python for the enrollment office

Engineering Intern – General Electric Gas Power | *Mar 2021 – May 2024*

- Built OCR/image-processing tools for industrial inspection automation
- Developed SQL-integrated dashboards and Excel VBA automation tools
- Programmed embedded control systems using Arduino and Raspberry Pi
- Rewired and reconfigured coordinate measuring equipment for lean optimization

Research Assistant – Advanced Structures & Composites Center | *Aug 2022 – Dec 2023*

- Helped develop a ROS2/Python calibration system for a multi-camera FLIR Boson array tracking 3D-print progress and failure detection
